DETAILED ACTION

Response to Amendment

1. This Action is in response to the Pre-Brief Conference dated October 15, 2009, in which the Office held a conference and re-opened prosecution.

Response to Arguments

2. Applicant argues that the prior art cite neither alone or in combination teach generating a VAD threshold based at least in part on the sidetone attenuation. Applicant's arguments are persuasive and the rejection has been withdrawn.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-12 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. While the claims recite a series of steps or acts to be performed, a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus, manufacture or a machine), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. The instant claims neither transform underlying subject matter nor positively tie to

Art Unit: 2626

another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. In particular, there is no physical transformation of an article in the claim language and the claim language does not cite any physical hardware to perform the steps, rather, the method is a manipulation of abstract data, which does not perform any useful, concrete tangible results.

Allowable Subject Matter

5. **Claims 13-35** are allowed.

The following is a statement of reasons for allowance:

As for independent claims 13 and 24, they recite a voice activity and communication system. Prior art such as Feltstrom and Michaelis discloses a similar system, but does not specifically teach generating a voice activity detection threshold based at least in part on sidetone attenuation.

Dependent claims 14-23 and 25-35 are allowed because they further limit their parent claims.
